# Think Like the Cardinality Estimator

Taiob Ali

#### Data Solutions Manager, GMO LLC

- http://sqlworldwide.com/
- in /sqlworldwide
- @sqlworldwide
- Taiob@sqlwroldwide.com

#### **Data Professional**

Microsoft Data Platform MVP. 14 Years working with Microsoft Data Platform. Microsoft and MongoDB certified. Worked in ecommerce, healthcare and finance industry.

#### **Giving Back**

Board member NESQL user group and PASS DBA virtual group. Organizer of Boston SQL Saturday. Frequent speaker at local and virtual user groups, SQL Saturdays, and azure events.

#### When Not Working

Running – One 26.2 and many 13.1 miles. Learning US history. Shuttling 3 kids.

# Agenda

- ☐ Predicate, Density, Predicate Selectivity
- ☐ What is Cardinality
- ■Why Cardinality Matters
- DBCC SHOW\_STATISTICS
- ☐ Magic Numbers

@SQWorldWide

## Predicate

Is an expression that evaluates to

TRUE, FALSE, or UNKNOWN

- ☐ Join
- ☐ Filter
  - Where
  - Having

## Predicate

```
SELECT
    cus.CustomerID,
    COUNT(0) AS [NumOfOrders]
FROM
    sales.Orders AS ord
JOIN
    sales.Customers AS cus
ON
    ord.CustomerID=cus.CustomerID
WHERE
    ord.OrderDate='2013-01-01'
GROUP BY cus.CustomerID
HAVING | COUNT(0)
G0
```

Join Predicate

Filter Predicate
Where/Having

# Density

How often duplicate values occur in a column.

1

[# of distinct values in a column]

```
COUNT(DISTINCT customerID) AS [DistinctCusId]

FROM
sales.Orders;

GO
```

# Predicate Selectivity

Most commonly used to describe a predicate.

[# rows that pass the predicate]

[total number of rows]

```
COUNT(0) AS [NumOfOrders]

FROM
sales.Orders

WHERE
CustomerID=577;

GO
```

# Cardinality

#### For Us

Number of rows returned by a query operator.

#### Structured Query Language

• <u>Uniqueness</u> of data values contained in a particular column (attribute) of a <u>database</u> <u>table</u>.

#### Math

• Cardinality of a <u>set</u> is a measure of the "number of <u>elements</u> of the set".

#### Clustered Index Seek (Clustered)

Scanning a particular range of rows from a clustered index.

| Physical Operation             | Clustered Index Seek |
|--------------------------------|----------------------|
| Logical Operation              | Clustered Index Seek |
| Actual Execution Mode          | Row                  |
| Estimated Execution Mode       | Row                  |
| Storage                        | RowStore             |
| Actual Number of Rows          | 12                   |
| Actual Number of Batches       | 0                    |
| Estimated Operator Cost        | 0.0032904 (8%)       |
| Estimated I/O Cost             | 0.003125             |
| Estimated Subtree Cost         | 0.0032904            |
| Estimated CPU Cost             | 0.0001654            |
| Estimated Number of Executions | 1                    |
| Number of Executions           | 1                    |
| Estimated Number of Rows       | 7.61577              |
| Estimated Row Size             | 143 B                |

# DBCC SHOW STATISTICS

#### Header

Meta data about the statistics.

### **Density Vector**

 How many unique values are present within a column or columns?

#### Histogram

 Frequency of data within the first key column of the statistics.

# DBCC SHOW\_STATISTICS

## □STAT\_HEADER

| Name                            | Updated | Rows  | Rows Sampled | Steps | Density     | Average key length | String Index | Filter Expression | Unfiltered Rows |
|---------------------------------|---------|-------|--------------|-------|-------------|--------------------|--------------|-------------------|-----------------|
